It currently consists of 26 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 misc_feature
               The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7 or send mailto:egreen@nhgri.nih.gov
                                                                                                                                                                                                                                                                                                                                                                                      NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is RP5-866N18. The actual start of
this clone is at base position 1 of CTB-114A6; actual end is at
188741 of CTB-114A6. This clone is part of an unanchored island,
                                                                                                                                                                                                                       This clone is from the first release of the human BAC library. The library contains cloned DNA from a human male fibroblast cell line 9785K. See: Shiruya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); Kim et al., Genomics 34:213-8 (1996). The clone is available from Research Genetics, Inc. (http://www.resgen.com).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note="match to EST AA325774 (NID:g1978267)"

On Jul 7, 2000 this sequence version replaced gi:7940159.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequences with an all overlap as described above. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the feature feature feature is an annotation using the 'unsure'
                                                            This clone (DKFZp56411916) is available at the RZPD in Berlin. Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059 Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further information about the clone and the sequencing project is available at http://www.mips.biochem.mpg.de/proj/cDNA/.

Submitted (29-JUN-2000) Sanger Centre, Hinxton, Cambridgeshire, CBIO 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Jul 1, 2000 this sequence version replaced gi:8546598.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations variation anotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with This sequence has been finished according to sequence as with This sequence has been finished according to sequence as we submit sequences with This sequence has been finished according to sequence as we submit sequences with This sequence has been finished according to sequence as we submit sequences with This sequence has been finished according to sequence as we submit sequences with This sequence has been finished according to sequence as we submit sequences with This sequence has been finished according to sequence as we submit sequences with the sequence has been finished according to sequence as we submit sequences with the sequence has been finished according to sequence as we submit sequences with the sequence as sequence as we submit sequences with the sequence as sequences as we submit sequences as the sequence as sequences are sequences as the sequence as sequences are sequences sequenc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AL137881 143324 bp DNA PRI 29-JUN-2000

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP, Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'

```
This sequence is the entire insert of clone RP11-40A8 The true left end of clone RP11-547C18 is at 69479 in this sequence. The true right end of clone RP11-233H19 is at 14112 in this sequence.
chromosome 13, constructed by the Sanger Centre Chromosome 13 mapping Group. Further information can be found at http://www.sanger.ac.uh/HGP/Chr13 RP11-40A8 is from the library RCI-11.1 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. ```
This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X happing Group. Further information can be found at http://www.anger.ac.uk/HGP/ChrX 22212 is from the library RPC16 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/ VECTOR: pPAC4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     on Mar 24, 1999 this sequence version replaced gi:4469058.

On Mar 24, 1999 this sequence version replaced from overlapping clones.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

IMPORTANT: This sequence is not the entire insert of clone 22D12. IMPORTANT: This sequence is not the entire insert of clone 22D12. II may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /evidence=not_experimental

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The true left end of clone 393P23 is at 69728 in this sequence. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note="MSTC repeat: matches 1. .405 of consensus" complement(join(1916. .3373,4913. .5084,34073. .34285, 35937. .36099,37414. .37638,44052. .44238,47425. .47637, 51717. .51913,55275. .55411,55801. .55943)

DEFINITION Human DNA sequence from clone 22D12 on chromosome Xq21.1-21.33.
Contains a novel protein similar to Drosophila Kelch (Ring Canal protein, KEL) and a heterogenous set of other types of proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (18-MAR-1999) Sanger Centre, Hinxton, Cambridgeshire, Submitted 1SA, UK.
